How to Select a Correct Bulk Ink System For Mutoh, Roland & Mimaki

1st STEP : Select the Type of Bulk Ink System

Bottle Type (NAPIS-B15)

A bottle unit is installed on the top of a printer. And each bottle is connected to each cartridge with ink tubing. The type is the most popular system.

Combined Type (NAPIS-III)

It is the modified type from a bottle type system. A bottle and cartridge are already combined. So you can plug and play the system without any assembling process.

1ℓ Ink Pouch Stand Type (NAPIS-II)

An ink pouch stand is installed on the top of a printer. And each ink pouch stand is connected to each cartridge with ink tubing. 1 liter ink pouch (end open and all side sealed) is available from us as your ink container.

1.5ℓ Ink Pouch Stand (NAPIS-SII)

It is the upgraded version of NPAIS-II system. The top of ink pouch stand is open and max, 1.5 liter ink pouch can be mounted in it. With auto stop valve, the system prevents air from going inside cartridges and ink from overflowing from the needle when replacing new ink pouch.

2nd STEP : Select the Type of Cartridge
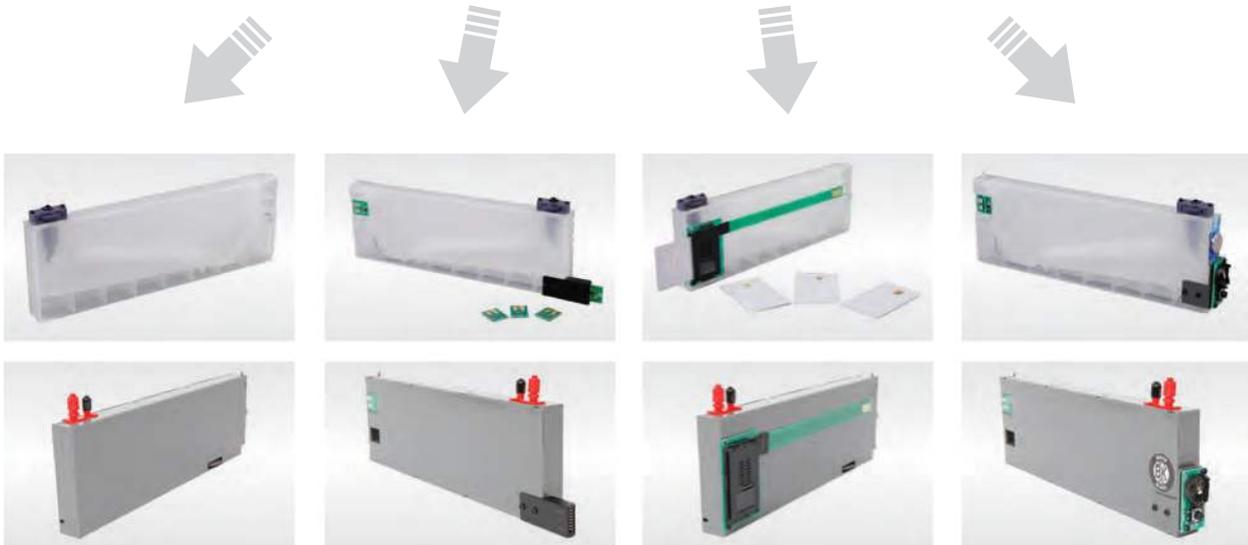

Floater Cartridge (Open Type)

The cartridge is suitable for the printer of which ink directly goes to printhead (damper) from cartridge. The floater is built inside a cartridge which helps you to adjust ink level. High ink level provides high pressure to a printhead and low ink level provides low pressure to a printhead.
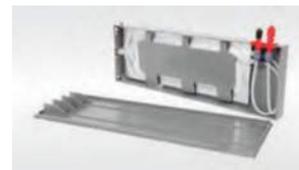

Ink Pouch Cartridge (Closed Type)

The cartridge is suitable for the printer of which ink goes to printhead via a sub tank(bag) from the cartridge. And also it is perfect for vertical positioned cartridges. The ink pouch has a plastic sensor. So if ink is empty on the top part (bottle or ink pouch stand), the plastic sensor comes out to make a printer stop. Then you can re-fill ink into the bottle or change new ink pouch on the top.

3rd STEP : Select the Chip Solution

Without Chip Solution
For Mutoh, Roland & Mimaki

The cartridge has only chip space for your own chips or for the printer which does not require chip.

With Single Chip Socket
For Roland & Mimaki

The cartridge has a single chip socket on the back of cartridges. You do not need to remove a cartridge to change new single chip of Roland and Mimaki from the printer. You can just replace single chip from the socket.

With Smartchip Socket
For Mutoh

The cartridge has the smartchip socket of Mutoh on the back of cartridge. It also does not require you to remove a cartridge from a printer to replace new smartchip. You just replace new single smartchip from the socket.

With Permanent Chip
For Mimaki

The cartridge has a permanent chip for Mimaki printers (JV-3, JV-33 (CJV-33), and JV-5 etc). The permanent chip consists of a programmed chip and a wired reset button (with battery). The programmed chip is initialized by resetting the chip.
