## Transfer papers water slide decals primers and protection for laser printers

**SHOCKLINE**  
about your transfer paper

design.kaleido.1.1.com

# SHOCKLINE

about your transfer paper

A **laser transfer paper** is a special paper which transfers a printed image on any surface

It's easy!

Choose a support

Choose a suitable transfer paper

Print the image on the transfer paper with a laser printer

Transfer the printed image with a heat press\*

Pull off the back paper

Our transfer papers give **excellent results** on most laser color printers on the market. **Shock Line... personalization without limits!**

\* except for water-slide decals

## Heat transfer papers for light colored fabrics

- FC SUPER2003+
- FC TOPCUT

Transfer papers for personalizing white or light colored cotton, natural and synthetic fabrics such as Lycra, satin, polyester. Suitable for t-shirts, polos, singlets, bags, pouches, caps, pillows, aprons, bibs, patches, ties, sportswear, work apparel, and much more.

FC SUPER2003+ is really unique for its very high quality graphical results and for its user friendly printing process.

FC TOPCUT is a single step, self weeding transfer paper. It transfers images with shadings up to 30%. Only the toner-colored areas are transferred.

## Heat transfer papers for various light colored surfaces

- FC FILM2
- FC SOFT

FC FILM2 is excellent for tanned skin, synthetic leather, wood and cardboard. It releases a thin but resistant film which protects the print. It can be cut & weed.

FC SOFT is the ideal for natural leather and wood. It releases a very thin film which does not change the material's natural look. These can be processed subsequently.

They are suitable for jackets, skirts, trousers, shoes, bags, belts, shelves, cabinets, chairs, frames, boxes and ideal for cardboard packaging.

+ FC FILM2 can also be used on colored or dark surfaces if combined with FO PRIPELW primer

+ FC SOFT with FO PRIMER ensures a better grip on complicated light colored surfaces and is suitable for surfaces with low heat resistance, maximum 120°C. It works with temperatures as low as 70°C.

## Water slide decals for decoupage objects

- FC DECAL (also covering)
- FC ME130BLU (also covering)
- FC WALLDEC
- FC SISDECBLUWT

Water slide decals for personalizing light or dark colored materials.

FC DECAL has a very strong adhesive film which makes it the ideal decal for absorbant surfaces like wood, cardboard and stone. Excellent for ceramic, wax candles and plaster.

FC ME130BLU is a thin water slide decal for hard flat or curved objects (ex. glass or Plexiglas) and for objects that can't be oven heated such as candles. Ensures strong adhesion. Cuttable.

FC WALLDEC has a very thin and transparent film suitable for porous white or light colored surfaces such as walls, wood, cardboard, plaster and clay. Ideal for "do it yourself" and decoupage.

FC SISDECBLUWT (FC SOFT+FC ME130BLU) is a transparent system for personalizing flat smooth or curved colored objects that can't be oven heated such as candles. Ideal for White Toner or standard laser printers.

Examples: small "frescos", Christmas or ornamental candles, helmets, vases, models, decoupage objects and anything else that comes to mind.

## DIGISERI

### Digi-screen print personalization system DIGISERI Laser

Is a printing system that allows you to make self weeding transfers with all the colors of the rainbow on any type of white or colored fabric with any laser printer and only one screen.

➔ **New! Thanks to SELF SCREEN**, the system for making transferable self weeding masks for screens, it is now possible to make your own screens in only 3 minutes and just 3 Euros. All you need is a CMYK printer and a heat press. More info at [www.shockline.it](http://www.shockline.it)

## Heat transfer papers for colored fabrics

- FC BLANC
- FC TOPCOLOR
- FC TOPDARKNEW

Transfer papers for personalizing dark or colored cotton, natural and synthetic fabrics such as Lycra, satin, polyester. Suitable for t-shirts, polos, singlets, bags, pouches, aprons, bibs, patches, ties, sportswear, work apparel, and much more.

FC BLANC is a cuttable, white background, single step transfer paper. Versatile and elastic, it ensures a perfect cut and a very soft screen print like feel.

FC TOPCOLOR (printable sheet + application tape sheet) is a self weeding transfer paper (No Cut). Ensures best results with CMYK and laser printers and the wide range of colors (standard, special and patterns) included in the Shock Line color palette (purchased with the product). TOPCOLOR enriches personalizations with white, colored and metallic foils.

FC TOPDARKNEW (glue sheet + image sheet) is a self weeding transfer paper (No Cut). Ensures very accurate, elastic, bright colored opaque prints and perfect cutting. It's the ideal for White Toner printers. For other printers testing is necessary.

+ FC BLANC with FO PRO90 ensures high temperature washing resistance. Ideal for work apparel.

## Heat transfer papers for light colored stiff materials

- FC POLARTGOLD
- FC POLARTNEW

Transfer papers for personalizing aluminum, Plexiglas, hard plastic, ceramic, glass and other metals.

FC POLARTGOLD is ideal for printers with very high fuser temperatures and for high temperature applications. FC POLARTNEW is suitable for other cases.

They are particularly useful for customizing objects such as metal plates, signs, souvenirs, sacred art objects, mirrors, vases, artistic repros, tiles, mugs and more.

Very high printing quality and very good scratch resistance. The pleasant semi-glossy finish gives the object added value. These transfer papers release only the toner.

## Heat transfer papers for cardboard and gadgets

- FC CART1
- FC GLOSS
- FC TRANPAD

FC CART1 is particularly useful for printing cardboard calendar headers, FC GLOSS is the ideal jigsaw puzzle transfer and FC TRANPAD is especially made for mousepads with white textile surface.

Special transfer papers dedicated to these applications. Glossy, photographic finish, great colors and excellent value for money.

Shock Line also offers its customers a range of gadgets such as puzzles in A4 and A3 sizes, with boxes, with or without frames, classical or heart shaped, from 48 to 192 pieces and textile lined mousepads.

## Primer and protection

Combine with transfer papers for extra value

- FO PRIPELW (also transparent)
- FO PRO90
- FO PRIMER

Primers and protections are useful for complicated surfaces or special applications.

FO PRIPELW is a background primer that gives a stronger grip and better covering on dark surfaces. FO PRIPEL (transparent) is suitable for light colored surfaces. Both are used with FC FILM2.

FO PRO90 is a heat melt protection that ensures industrial washing resistance. Use with FC BLANC.

FO PRIMER (transparent) improves grip on complicated light colored surfaces and on surfaces with low heat resistance, maximum 120°C. It works with temperatures as low as 70°C. Use with FC SOFT.
